

AMENDMENTS TO THE CLAIMS:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) Single-use packaging for a liquid, semiliquid, or powder substance, the packaging comprising:

a protective cover made of two separable parts of leakproof material, and

a breakable leakproof blister containing one dose of said substance for application to skin of a person, and

a pouch comprising an applicator, wherein:

said blister is housed in said pouch with said pouch completely surrounding said blister on all sides thereof,

said pouch is permanently fixed in operation to an inside face of one of said two separable parts, and

said applicator is impregnated with said substance when said blister is broken.

2. (Canceled)

3. (Previously Presented) Packaging according to claim 1, wherein:

said pouch comprises a first part of flexible material fixed to said inside face, and a second part of material that is flexible and porous, forming said applicator, and

said two parts are united by a closed outline junction line with said blister being held captive between said two parts.

4. (Previously Presented) Packaging according to claim 3, further comprising a piece of cotton wool housed inside the pouch.

5. (Previously Presented) Packaging according to claim 1, wherein said protective cover is made of two flexible parts that are united by a closed outline junction line surrounding a location of said pouch.

6. (Previously Presented) Packaging according to claim 5, wherein said junction line surrounds an area that is significantly greater than an area occupied by said pouch, and said pouch is located substantially in the center of the area surrounded by said junction line.

7. (Previously Presented) Packaging according to claim 5, wherein said junction line permits said two parts to be separated by being peeled apart and is one of:

a line of low strength adhesive, and
heat-sealing.

8. (Previously Presented) Packaging according to claim 5, wherein said junction line extends over a fraction of a length of said two parts at a distance apart from facing edges of said two flexible material parts, to define pull tabs which enable said two parts to be separated.

9. (Previously Presented) Packaging according to claim 1, further comprising a peel-off cover containing an adhesive dressing with one of its faces fixed on an outside face of said protective cover.

10. (Previously Presented) Packaging according to claim 9, wherein an outside face of said dressing is weakly secured to an inside face of a portion of the peel-off cover that is not fixed to the protective cover.

11. (Currently Amended) Single-use packaging for a liquid, semiliquid, or powder substance, the packaging comprising:

a protective cover made of two separable parts of leakproof material,

a breakable leakproof blister containing one dose of said substance for application to skin of a person, and

a pouch comprising an applicator, wherein:

said protective cover is made of two flexible parts that are united by a closed outline junction line surrounding a location of said pouch, and

said pouch is permanently fixed in operation to an inside face of one of said two separable parts,

said pouch comprises a first part of flexible material fixed to said inside face, and a second part of material that is flexible and porous, forming said applicator, and

said two parts of said pouch are united by a closed outline junction line with said blister being held captive between said two parts with said pouch completely surrounding said blister on all sides thereof, and

said junction line of said protective cover surrounds an area that is significantly greater than an area occupied by said pouch, and said pouch is located substantially in a center of an area surrounded by said junction line, and

said applicator is impregnated with said substance when said blister is broken.
